

## Basic Facts About Low-income Children *Children Under 6 Years, 2011*

Sophia Addy | William Engelhardt | Curtis Skinner

January 2013

Children represent 24 percent of the population, but they comprise 34 percent of all people in poverty.<sup>1</sup> Among all children, 45 percent live in low-income families and approximately one in every five (22 percent) live in poor families. Young children under 6 years of age appear to be particularly vulnerable, with 49 percent living in low-income families and 25 percent living in poor families. Being a child in a low-income or poor family does not happen by chance. There are a range of factors associated with children's experiences of economic insecurity, including race/ethnicity and parents' education and employment. This fact sheet describes the demographic, socio-economic, and geographic characteristics of young children and their parents. It highlights important factors that appear to distinguish low-income and poor children in this age group from their less disadvantaged counterparts.

### National Center for Children in Poverty

Columbia University

### How many young children under 6 years old in the United States live in low-income families?

There are nearly 24 million young children under 6 years old in the United States.

- ◆ 49 percent – 11.5 million – live in low-income families.
- ◆ 25 percent – 6 million – live in poor families.

### Children under 6 years old by family income, 2011

**What was the federal poverty level (FPL) in 2011?<sup>2</sup>**

- ◆ \$22,350 for a family of four.
- ◆ \$18,530 for a family of three.
- ◆ \$14,710 for a family of two.

**Is a poverty-level income enough to support a family?<sup>3</sup>**

Research suggests that, on average, families need an income equal to about two times the federal poverty level to meet their most basic needs.<sup>3</sup> Families with incomes below this level are referred to as low income:

- ◆ \$44,700 for a family of four.
- ◆ \$37,060 for a family of three.
- ◆ \$29,420 for a family of two.

These dollar amounts approximate the average minimum income families need to make ends meet, but actual expenses vary greatly by locality. In 2011, the cost of meeting basic family needs was about \$64,000 per year in Los Angeles for a family of four. In 2010, the cost was \$57,000 in Newark, N.J., \$47,000 in Billings, Mont., and \$42,000 in Jackson, Miss.<sup>4</sup>

**What is the 2012 federal poverty level (FPL)?**

- ◆ \$23,050 for a family of four.
- ◆ \$19,090 for a family of three.
- ◆ \$15,130 for a family of two.

**Has the percentage of young children living in low-income and poor families changed over time?**

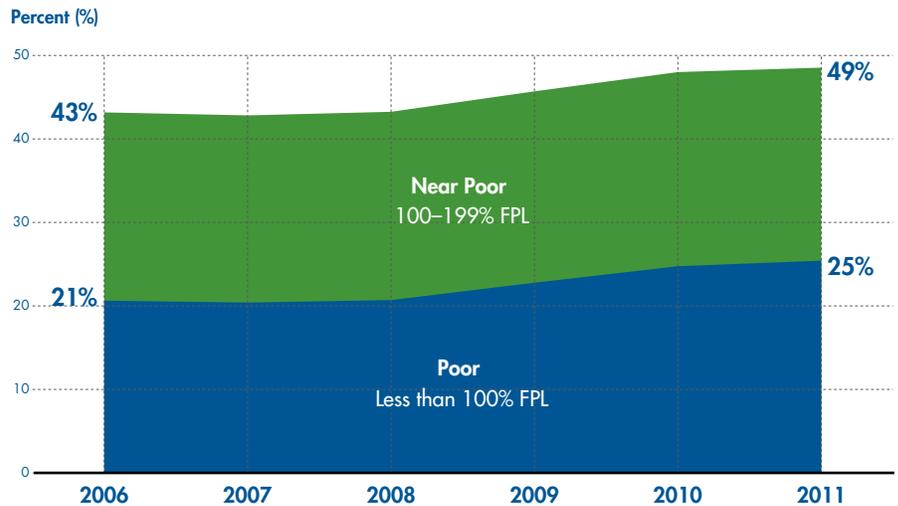

The percentage of young children living in low-income families (both poor and near poor) has been *on the rise* – increasing from 43 percent in 2006 to 49 percent in 2011. During this time period,

the overall number of young children under 6 years old remained relatively constant, while the numbers who were low income and poor increased by 12 percent and 22 percent, respectively.

**Percentage change of children under 6 years old living in low-income and poor families, 2006–2011**

	2006	2011	Percent change
Low-income	10,329,019	11,533,628	12%
Poor	4,934,758	6,039,500	22%

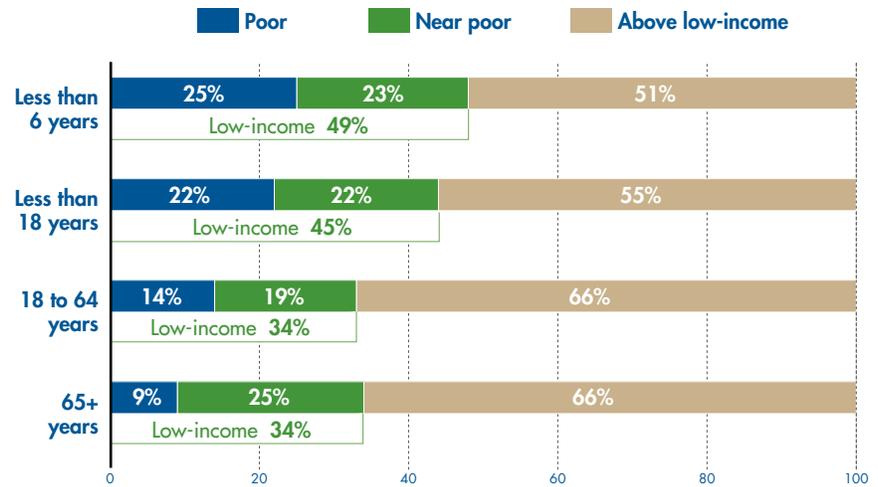

**Children under 6 years old living in low-income and poor families, 2006–2011**

## How do young children compare to the rest of the population?

The percentage of young children in low-income families surpasses that of adults. In addition, children under 6 years old are more than twice as likely as adults age 65 years and older to live in poor families.

Family income by age, 2011

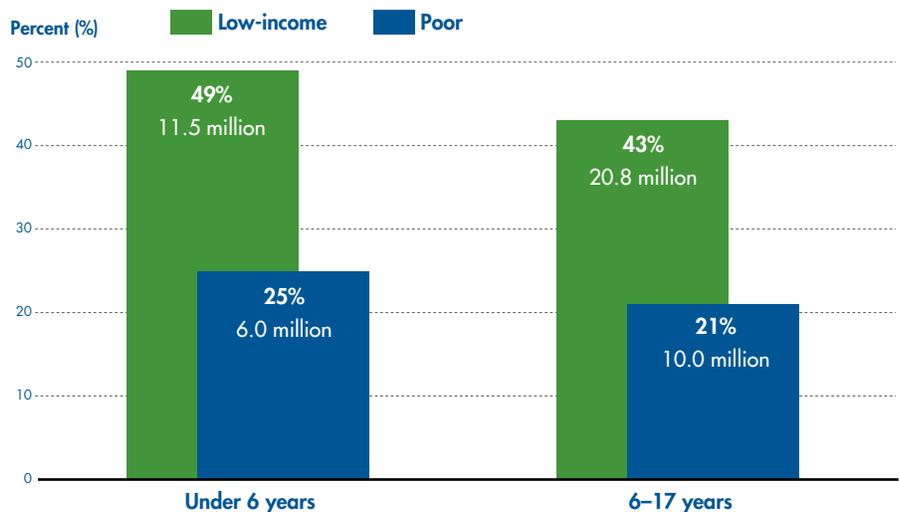

Percentages may not add to 100 due to rounding.

## Does the percentage of children in low-income families vary by children's age?

The overall percentages of children living in low-income and poor families mask important variations by age. Although children under 6 years of age represent 33 percent of the population under 18 years, they are disproportionately low income.

- ◆ 49 percent of children under 6 years old – 11.5 million – live in low-income families.
- ◆ 43 percent of children 6 through 17 years old – 20.8 million – live in low-income families.

Percentage of children in low-income and poor families by age, 2011

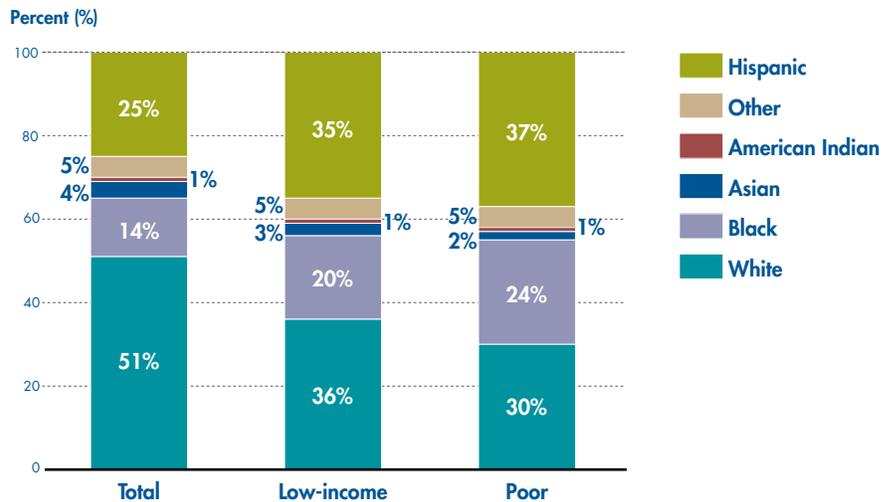

## Does the percentage of young children in low-income families vary by race/ethnicity?<sup>5</sup>

Although black, American Indian, and Hispanic children under 6 years of age are disproportionately low income, white children comprise the largest group of low-income young children, and children of Hispanic origin make up the largest group of poor young children.

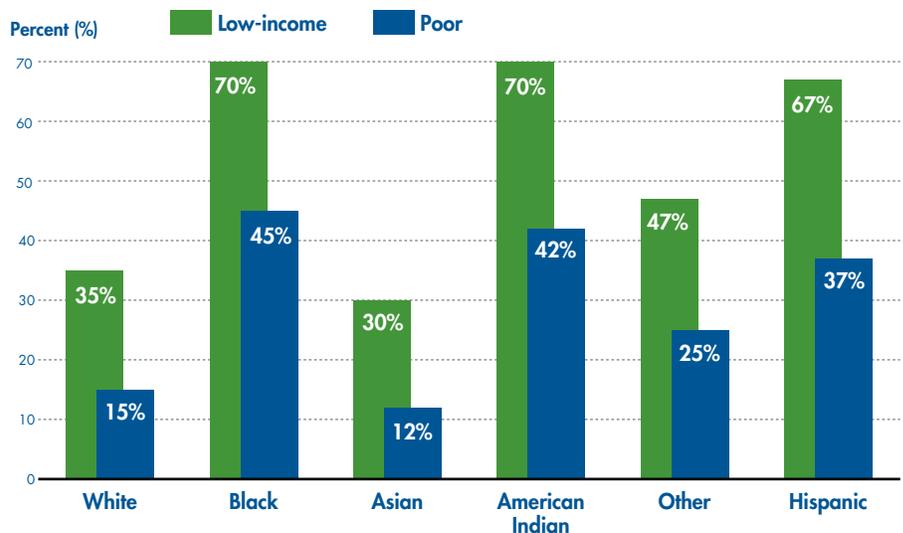

- ◆ 35 percent of white children under 6 years old – 4.2 million – live in low-income families.
- ◆ 70 percent of black children under 6 years old – 2.3 million – live in low-income families.
- ◆ 30 percent of Asian children under 6 years old – 0.3 million – live in low-income families.
- ◆ 70 percent of American Indian children under 6 years old – 0.1 million – live in low-income families.
- ◆ 47 percent of children under 6 years old of some other race – 0.6 million – live in low-income families.
- ◆ 67 percent of Hispanic children under 6 years old – 4.1 million – live in low-income families.

**Race/ethnicity among children under 6 years old by family income, 2011**

Percentages may not add to 100 due to rounding.

**Percentage of children under 6 years old in low-income and poor families by race/ethnicity, 2011**

## Does the percentage of young children in low-income families vary by parents' country of origin?<sup>6</sup>

- ◆ 65 percent of children under 6 years old with immigrant parents – 2.8 million – live in low-income families.
- ◆ 46 percent of children under 6 years old with native-born parents – 8.2 million – live in low-income families.

## What are the family characteristics of low-income and poor young children?

### Parents' Education<sup>7</sup>

Higher levels of parents' education decrease the likelihood that a child will live in a low-income or poor family. Yet, nearly one-half (47 percent) of low-income and over one-third (38 percent) of poor young children have a parent with at least some college education.

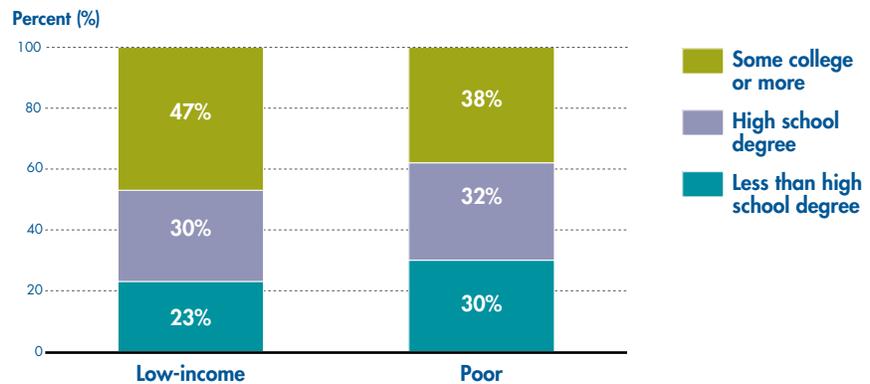

- ◆ 88 percent of children under 6 years old with parents who have less than a high school degree – 2.6 million – live in low-income families.
- ◆ 72 percent of children under 6 years old with parents who have a high school degree but no college – 3.5 million – live in low-income families.
- ◆ 34 percent of children under 6 years old with at least one parent who has some college or more education – 5.4 million – live in low-income families.

### Parents' Employment<sup>8</sup>

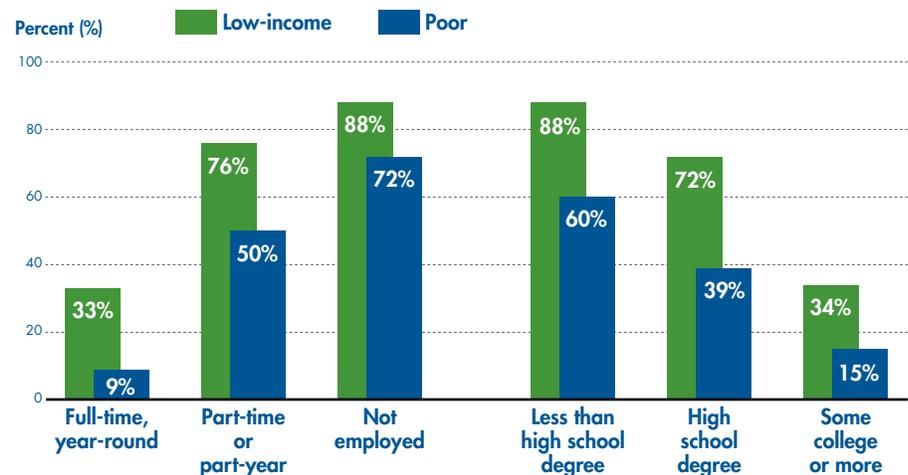

Although young children with a full-time, year-round employed parent comprise 45 percent of the low-income population, they are less likely to be living in a low-income family, compared to young children with parents who work part-time/part-year or who are not employed.

- ◆ 33 percent of children under 6 years old with at least one parent who works full-time, year-round – 5.2 million – live in low-income families.
- ◆ 76 percent of children under 6 years old with at least one

### Parents' education among children under 6 years old by family income, 2011

### Percentage of children under 6 years old in low-income and poor families by parents' employment and education, 2011

parent who works part-time or part-year – 4 million – live in low-income families.

- ◆ 88 percent of children under 6 years old with no employed parents – 2.4 million – live in low-income families.

### Family Structure

Forty-seven percent of young children in low-income families – 5.4 million – and 35 percent of

young children in poor families – 2.1 million – live with married parents.

- ◆ 35 percent of children under 6 years old with married parents – 5.4 million – live in low-income families.
- ◆ 75 percent of children under 6 years old with a single parent – 6.2 million – live in low-income families.

## Does the percentage of young children in low-income families vary by where they live?

### Region

The percentage of children under 6 years of age in low-income families varies substantially by region.

- ◆ 40 percent of children under 6 years old in the Northeast – 1.5 million – live in low-income families.
- ◆ 48 percent of children under 6 years old in the Midwest – 2.4 million – live in low-income families.
- ◆ 52 percent of children under 6 years old in the South – 4.8 million – live in low-income families.
- ◆ 49 percent of children under 6 years old in the West – 2.9 million – live in low-income families.

### Type of Area

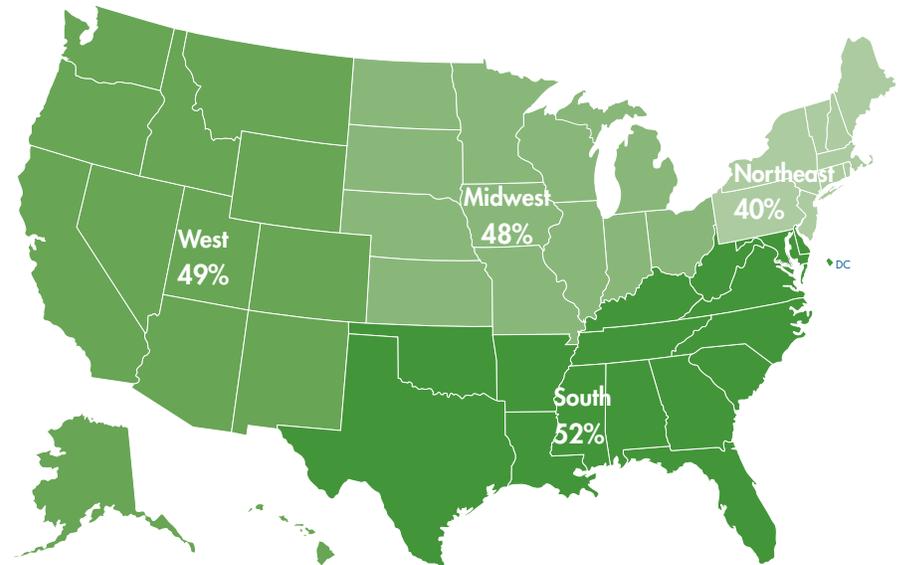

Similarly, children under 6 years of age living in rural areas are more likely to live in low-income families compared to those living in urban areas.

- ◆ 47 percent of children under 6 years old in urban areas – 8.7 million – live in low-income families.
- ◆ 57 percent of children under 6 years old in rural areas – 2 million – live in low-income families.

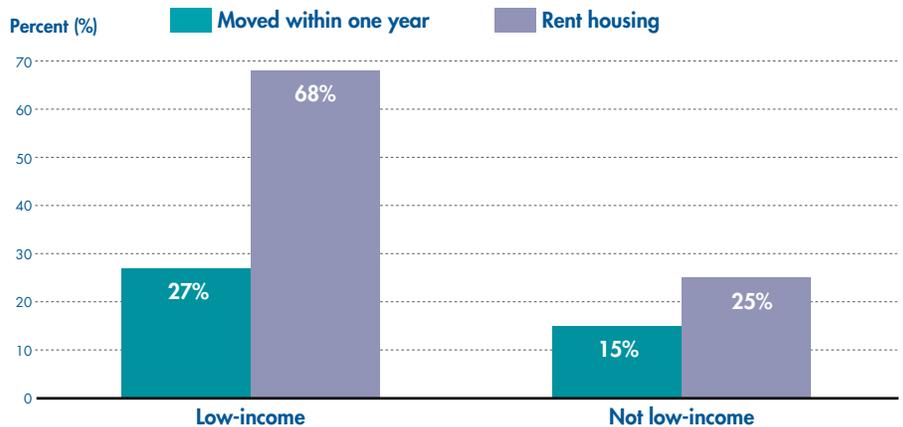

### Residential Instability and Home Ownership

Research suggests that stable housing is important for healthy child development.<sup>9</sup> However, young children living in low-income families were nearly twice as likely

Percentage of children under 6 years old in low-income families by region, 2011

Residential instability and home ownership among children under 6 years old by family income, 2011

as other children to have moved in the past year and nearly three times as likely to live in families that rent a home.

- ◆ 27 percent of children under 6 years old in low-income families – 3.1 million – moved in the last year.
- ◆ 15 percent of children under 6 years old in families with

higher income – 1.9 million – moved in the last year.

- ◆ 68 percent of children under 6 years old in low-income families – 7.9 million – live with a family that rents a home.
- ◆ 25 percent of children under 6 years old in families with higher income – 3 million – live with a family that rents a home.

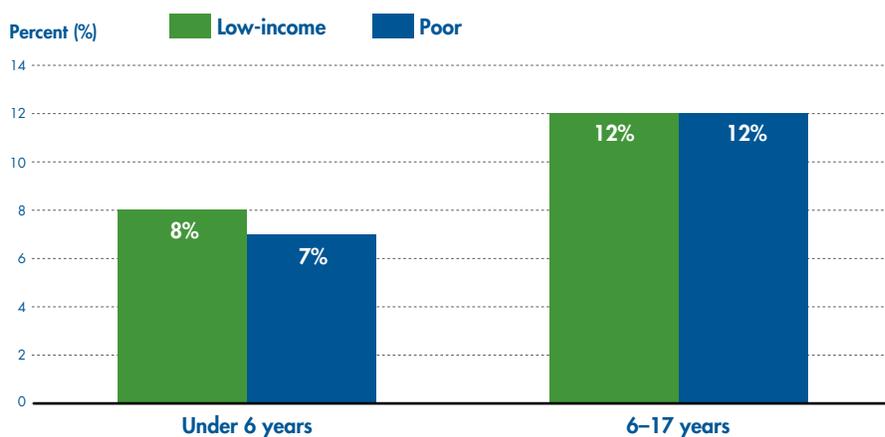

## Are young children in low-income families covered by health insurance?<sup>10</sup>

Among all young children under 6 years of age, approximately 8 percent in low-income families and 7 percent in poor families are uninsured. Consistent with research suggesting older children in general are particularly at risk of being uninsured, low-income and poor children under 6 years old are less likely to be without health insurance coverage compared to older children in low-income and poor families.<sup>11</sup>

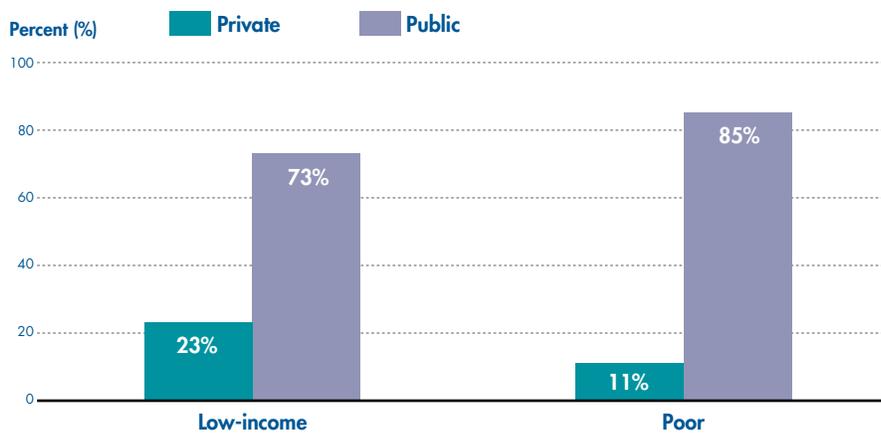

Public insurance reaches the largest share of economically disadvantaged children under 6 years old covering 73 percent of low-income children and 85 percent of poor children in this age group.

- ◆ 8 percent of children under 6 years old living in low-income families – 0.9 million – are uninsured.
- ◆ 23 percent of children under 6 years old living in low-income families – 2.7 million – are covered by private insurance.
- ◆ 73 percent of children under 6 years old living in low-income families – 8.4 million – are covered by public insurance.

## Endnotes

*This fact sheet is part of the National Center for Children in Poverty's demographic fact sheet series and is updated annually. Unless otherwise noted, analysis of the 2011 American Community Survey (ACS) was conducted by Sophia Addy of NCCP. Yumiko Aratani provided feedback that contributed to the analysis. Estimates include children living in households with at least one parent and most children living apart from both parents (for example, children being raised by grandparents). Children living independently, living with a spouse, or in group quarters are excluded from these data. Children 14 years old and under living with only unrelated adults were not included because data on their income status were not available. Among children who do not live with at least one parent, parental characteristics are those of the householder and/or the householder's spouse. Special thanks to Morris Ardoin, Amy Palmisano, and Telly Valdellon.*

1. In this fact sheet, poverty is defined as family income less than 100 percent of the poverty threshold; low income is defined as family income less than 200 percent of the poverty threshold.
2. These numbers are from the federal poverty guidelines issued annually by the U.S. Department of Health and Human Services. The demographic findings in this fact sheet were calculated using more complex versions of the federal poverty measure – the thresholds issued by the U.S. Census Bureau. Please see <http://aspe.hhs.gov/poverty/11poverty.shtml> for the 2011 poverty thresholds. For more information on measuring poverty and the differences between the federal poverty guidelines and the thresholds, see the U.S. Department of Health and Human Services website.
3. Cauthen, Nancy K.; & Fass, Sarah. (2008). *Measuring income and poverty in the United States*. New York, NY: National Center for Children in Poverty, Columbia University, Mailman School of Public Health.
4. These figures were derived from NCCP's Basic Needs Budget Calculator.
5. In the most recent ACS, parents could report children's race as one or more of the following: "White," "Black," "American Indian or Alaska Native," or "Asian and/or Hawaiian/Pacific Islander." In a separate question, parents could report whether their children were of Hispanic origin. For the data reported, children whose parent reported their race as White, Black, American Indian or Alaska Native, or Asian and/or Hawaiian/Pacific Islander and their ethnicity as non-Hispanic are assigned their respective race. Children who were reported to be of more than one race were assigned as Other. Children whose parent identified them as Hispanic were categorized as Hispanic, regardless of their reported race.
6. Children under 6 years old living in households with one immigrant parent and one native-born parent (approximately 1.5 million) are not included in these estimates.
7. Parent's education is the education level of the most highly educated parent living in the household. Parents can either have no high school degree; a high school degree, but no college; or some college or more.
8. Parent's employment is the employment level of the parent in the household who maintained the highest level of employment in the previous year. Parents can either have no employment in the previous year, part-year or part-time employment, or full-time, year-round employment. Part-year or part-time employment is defined as either working less than 50 weeks in the previous year or less than 35 hours per week. Full-time, year-round employment is defined as working at least 50 weeks in the previous year and 35 hours or more per week for more than half the year.
9. Aratani, Yumiko. (2009). *Homeless children and youth*. New York, NY: National Center for Children in Poverty, Columbia University, Mailman School of Public Health.
10. People can report more than one type of insurance coverage. Children not covered by private or public health insurance at the time of the survey are considered uninsured.
